

Roof Pitch Information

How To...

...find your roof pitch

To determine the pitch of your roof, place a level against the roof as shown below. From the point where the level touches the roof, measure out 12 inches. From this point, measure the distance, in inches, down to the roof. This number will be the first number in the roof pitch. The second number will always be 12. For example, the roof pitch pictured here would be expressed as "5 on 12".
